DOVE.

Speculum anni à partu Virginis

MDCXLVII.

OR

An Almanack for the
yeare of our Lord God

1647.

*Being the third after Bissextile
or Leap-yeare, and from the
Worlds creation.*

5657.

Calculated properly for the famous Uni-
versitie and Town of Cambridge,
where the pole is elevated
52. degr. 17. min.

But may indifferently serve for any other
place within this Kingdome.

*Candida quæ nitido volvuntur sidera cælo,
Formavit mira conditor æque Deus;
Indidit & vires, quæ corpora tantæ ratiæ
Efficiunt variis inferiora modis.*

Printed by R. Passet, Printer to
the Universitie of Cambridge.

T He golden number 14 } *Ann. Dom*
 The cycle of the sun 4 }
 The Epact 4. } 1647.

The allowance for light gold.

<i>Shillings.</i>			
In every piece of	33	the remedy must not exceed	4 grains and an half.
	30		4 grains and an half.
	22		3 grains.
	20		3 grains.
	16 & 6 pence		2 grains and an half.
	11		2 grains.
	10		2 grains.
	5 & 6 pence		1 grain.
	5		1 grain.
	4 4 pen. 3 farth.		1 grain.
	2 & 9 pence		half a grain.
	2 & 6 pence		half a grain.

Of the currancie of gold.

And note, that any piece of 'old gold', (as a 22 or 11 shillings piece) is payable for two pence a grain, when it exceedeth the remedy, if it want not above the double remedie. But for new gold, (as 20, & 10) they must never exceed their remedie: for if they do, they are not to be offered in payment. Neither are the 22, 11, and such like, to be taken, if they exceed the double of their remedie. By observing this difference, the former table will be well understood.

A note of the time forbidding marriage.

When Advent-sunday cometh, marriage is forbidden untill Hilarie, or the 13 of January. Then at Septuagesima it goeth out again untill Low Sunday. Afterwards at Rogation it is also forbidden: but at Trinity Sunday it cometh in again, and so continueth untill Advent.

The

The Anatomie of mans bodie, as the parts thereof are by Astrologers attributed unto the 12 Signs of the Zodiack.

♈ Aries head and face

♎ Neck and throat

♊ Breast, stomach & ribs

♏ Pisces the feet

The Characters of the Planets, and their Aspects.

♄ Saturn. ♃ Jupiter. ♂ Mars. ☉ Sol. ♀ Venus. ☿ Mercurie. ☾ Luna.

Conjunction. ☌ Opposition. ☐ Trine. ☐ Quartile. ☐ Sextile.

♈ The dragons head. ☐ The dragons ☐ tail.

Astro-

Astronomical notes for the year of our Lord God, 1647.

The true or apparent length of the tropicall yeare, is 365 dayes, 5 hours, 55 minutes, 38 seconds, and 26. thirds.

The greatest obliquity of the Zodiack is 23 degrees, 28 minutes, and 5 thirds. The precession of the Equinoctiall is 28 degrees, 32 minutes, 8 seconds, 35 thirds, and 17 fourths.

Saturn is direct from the second of *January*, till the second of *September*: after that retrograde all the yeare after.

Jupiter ceaseth to be retrograde on the 15 day of *March*, and cometh not into the like motion again untill the 14 of *December*.

Mars beginneth to be direct on the 25 day of *February*, and is so all the yeare after.

Venus begins not to be retrograde till the third of *Novem.*

Mercurie is retrograde from the 3 of *January*, till the 4 of *February*. Retrograde again from the last of *April*, till the 21 of *May*. And retrograde from the 23 of *August*, till the 15 of *September*. Retrograde also from the 17 of *December* beyond the yeare end. But at all other times direct.

Note also that **♄** will be in a quadrate with **☉** on the 21 of *January*, and in the like aspect with **♂** about 3 dayes after. On the 15 of *February* he is in a quadrate with **♂**. In conjunction with him on the 11 of *April*, and with **♂** on the 13 of the same. He hath the like meeting with **☉** on the 2 of *May*.

But (omitting many) I cannot but take notice of the great configurations of the Planets in *January* this yeare 1647. At first an opposition almost of **♂** and **♂** on the 5 day. An opposition of **☉** and **♂** on the 12. An opposition of **☉** and **♂** on the 14. An opposition of **♂** and **♂** on the 17. Of **♂** and **♂** on the 18, and a conjunction of Jupiter and Mars (in Leo) on the 22 day, between 5 and 6 at night: in which conjunction **♂** is much elevated above **♂**. There is also another conjunction of Jupiter and Mars on the 21 day of *March*, in the 18 degree of Cancer; in which **♂** also is predominant: in the latter end of which moneth are quadrates of **♂** and **♂**. **♂** and **♂**. **♂** and **♂**. **♂** and **♂**. The 18 of *April* **☉** **♂**. The 22 of *May* **♄** **♂**. And on the 18 of *October* a quadrate of **♂** and **♂**.

A Table shewing the length of the day, which
may be also found without this Table, by doubling
the houre and minute of Sun-setting.

I find this moneth so full of great, & strange configurations of the planers, as that I cannot but think it will prove farre differing from the Januaries of former years, and may perhaps afford some thunder and lightning, with hotter weather then is usual. It seemeth also to portend strange and extraordinary things in some places, by reason of the great dominion which is in Mars, whilst he and Jupiter are in conjunction.

Rox comit Malden by ex Newcastle Feb.

Saturn is with the moon the first day, about 7 at night. Jupiter, Mars, and the moon, are very near together on the sixth and seventh dayes. Mercurie will be with her on the 22 day, and Venus on the day after, being the very day that the moon changeth; and therefore hid under the sunnes beams, and cannot be seen.

In this moneth the planets afford many a friendly trine, and sextile aspect, as may be seen on their severall dayes foregoing the conjunction of Jupiter & Mars which is noted to be on the 21 day, in the 28 degree of cancer. I think it to be a conjunction worth the marking, and do expect some windy dayes, and the most part pleasant weather, wind blowing up storms of rain the 17 & 18 for then weath. begins to be worse then before, and is bad enough on sundry dayes after, the 19 and 21 windy weath. the 26 day, the 27 and 28 mistie wet & turbulent weath. 3 last days

marry 19. Lint. Bifield came to quartering it is or 16 half
 men & went Apr. 26. They paid 20 p. & 10 p. & 10 p.
 horsemen. & the horse for 10 p. & 10 p. & 10 p.

On the tenth day of this moneth, at 49 min. past two in
 the afternoon, the sunne enters into Aries: three hours after
 which the moon cometh to the full, & is in a sextile to Jupiter
 & Mars, & in an opposition to Mercurie. The 27 degree of leo
 is found in the horoscope, & in the mid-heaven the 15 degree
 of taurus. About the 19 & 21 dayes expect hot weather with
 thunder and lightning, by reason of the conjunction of ♃ & ♄
 & so much the rather, because Mars is lord of this quarter.

2. paid Jo. Monfman 5 The Keep Constable 1000 lb toward
 master of soldiers. 15 A paid my mother 1000 lb
 9. paid the Monfman 1000 lb for 4 months, for to the
 then ended on the 22.

Venus & Mercurie are in conjunction the 3 day in Taurus, the house of Venus; at which time Mars is with the Moon in Leo, being lately come away from Jupiter, whom she left in the 28 degree of Cancer, her own house: she is also on the same day in a quadrate to Venus and Mercurie: all which (in my judgement) is like to produce, not onely wind and storms; but some thund. also on the 3 day of this moneth in the morning.

may 26. I paid Tho. Keop 22 1/2 p. of 3 taxos
for quarter & my mother paid back for me 12 p. of
I had paid her for the 3 taxos more but to 33 dayes
is her 3 taxos are but 34.

The Sunne and 5 turn earken the airc on the 2 day: and on the 9 day the Sunne and Mercurie raise great winds. Jupiter is with the moon the 7 day, and Mars on the first day. Mars likewise is with her on the 19 day. Saturn and Mercurie are both with her on the 22, at which time is an hatefull square of Saturn and Mars, about 8 a clock at night: a signe of heat and thunder.

 12. apud Loppington

Saturn is with the Moon the 19 day, at which time Iupiter
 and Venus are in conjunction in the ninth degree of Leo.
 Mercury is with Luna the 24 day, but too near the Sun to be
 seen. Iupiter and Venus are with her the 24 day in the West,
 and are not without dignities, for Iupiter is chief Dominator
 in the Summer quarter; Luna is his partner, and so in some
 sort is Venus.

The 5 day is a conjunction of Sol and Mercury early in the morn. and on the 17 day a conjunction of Jupiter and Mercury, betokening much wind then. On the 16 day Saturnis with the Moon, & on the 22 day Jupiter & mercury; but these last are too near the Sun to be seen. Venus is with her the 24 and Mars the 25, about which time the weather may be turbulent and stormy, as is already noted in its proper place.

The second day there is a conjunction of the Sun and Jupiter in the 19 degree of Leo, which may produce thunder, or sultry hot weather, the 14 day Mars and Venus are in conjunction likewise about the 14. degree of Libra, portending stormes. On the 21 Mercury is with the Moon, and on the 22 and 23 Mars and Venus; they are with her in the 19 degree of Libra, causing wet and windy weather.

The 4 and 5 days Saturn is with the Moon. Jupiter is with her on the 13 day: Mars is with her the 19 day, and Venus on the day after at 10 a clock at night in the West. Mercury is with her on the same day that she changeth, at which time the weather is like to be windy, and inconstant. The 28 a quadrate of ♃ and ♄, the ☉ and ♀ being then in conjunction.

The 3 day Saturn and the Moon will be together. On the 10 day look and you may see Jupiter with her. Venus, Mercury, Mars, the Sun and the Moon are very neare together on the 16 and 17 dayes, a sign of much wind and wet about that time; and on the 20 day turbulent, wet and windy. The last day Saturn will be with the Moon again.

Note that each King began his raigne at the same time that the next precedent King ended his.

Dove. 1647.

An exact and perfect computation of the
Seven Ages of the World.

From the	Creation to the Flood	— 1656 —	<i>The first Age.</i>
	Flood to the Promise	— 427 —	<i>The second Age.</i>
	Promise to the Law	— 410 —	<i>The third Age.</i>
	Law to the Temple	— 480 —	<i>The fourth Age.</i>
	Temple to the Captivity	— 411 —	<i>The fifth Age.</i>
	Captivity to Christ	— 606 —	<i>The sixth Age.</i>

The seventh Age beginneth at the Birth of Christ,
and hath continued (according to the Vulgar Ac-
count) 1646, yeares fully and compleat, for now we
write 1647.

And note, that whereas I mention 606 yeares
from the Captivity to Christ, it is meant of so ma-
ny yeares from the beginning of the Captivity in the
fourth yeare of Jehoiakim, to the first year of the com-
mon Era of Christs Nativity exclusively.

Note also, that by this computation it appeareth,
that from the Creation of the World to this yeare
present, are 567. yeares currant, there being 656.
yeares compleat, and finished at (or about) the time
of our Vernal Equinox: And why I say, at or a-
bout, is because there were three dayes of the Crea-
tion past, before the Sun and Moon were made.

Omnia cum vireant tunc est nova temporis ætas.
Sic annus per ver incipiendus erit.

C

Memorable

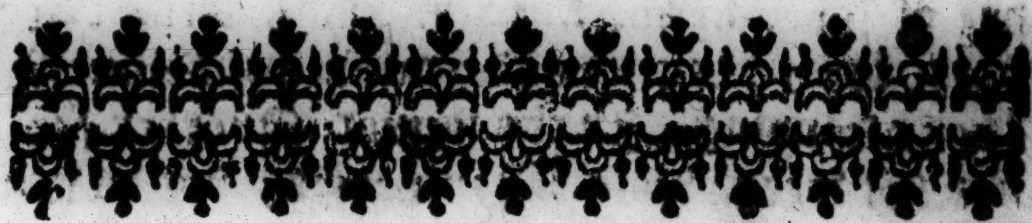

Memorable Accidents;

O R,

A Chronologicall description of many things
worthy of memory, shewing how long they hap-
ned before this year of our Lord 1647.

Since the Creation of the World	5657
Since Noahs Flood	4001
Since the Promise made to Abraham	3574
Since the Chilozen of Israel came out of Egypt	3144
Since Salomon began to build the Temple	2664
Since Nebuchadnezzar burnt the Temple	2234
Since the destruction of Jerusalem by Titus	1577
Since the writing of the Revelation by S. John	1552
Since the first Generall Council	1328
Since Cambridge was made an Univerſitie	1012
Since England was conquered by Duke William	81
Since the first Mayor of London	457
Since the invention of Gunnes	287
Since the invention of Printing	207
Since Coaches were first used in England	92
Since the first Starre in Cassiopea	75
Since the whole Hebrins seemed to burne	73
Since Tilburie Campe on S. James his day	59
Since the Voyage to Cadiz	51
Since the Gun-powder Treason	41
Since the great frost towards the end of this yeer	40
Since the last Blazing Starre	29
Since Prince Charles was borne	17
Since Tho. Par dyed, being 152 yeares old	12

Note, that on the 27 day of March we are to begin
the 21 yeer of our King, for then he hath reigned
20 yeares compleat. Vivat Rex.

Of the foure Seasons or Quarters
of the Yeare.

A Quinoctium Vernall, or the Vernum Equinox, is alwayes at the Sunnes entrance into Aries, which gibes beginning to the Spring, and from whence the Reuelations of the World are Astrologically reckoned, because at that time of the yeare the World was Created. The time of this Equinox was then about the 21 day of April, and fourth day of the weeke, the Sonne being then at the Fall; the Cycle of the Sunne was 4, the Dominicall Letter E, and the Golden Number, One. Thus it was then: But now the Equinox is sooner, and will be this yeare on the 10 day of March, 49 minutes past 2 a clock in the afternoone; at which time the 27 degree of Leo is in the Horizon, and the 15 of Taurus in the midst of Heauen. The reason of which difference is, in regard of the anticipation of the Equinoctiall, which in one yeare amounts to 10 minutes and 48 seconds, encreasing to the quantitie of a day in the space of about 134 yeares.

Solstitium Aestivum, or the Summer Solstice, begins alwayes with the Sunnes entrance

Dove. 1647.

into Cancer, which will be this yeare on the 11. day of June, at 40. minutes past 6 in the afternoon, the 10 degree and 7 minutes of Sagittarius then ascending. In the former Quarter Mars and Sol were chiefe Dominators; but now in this Jupiter and Luna rule.

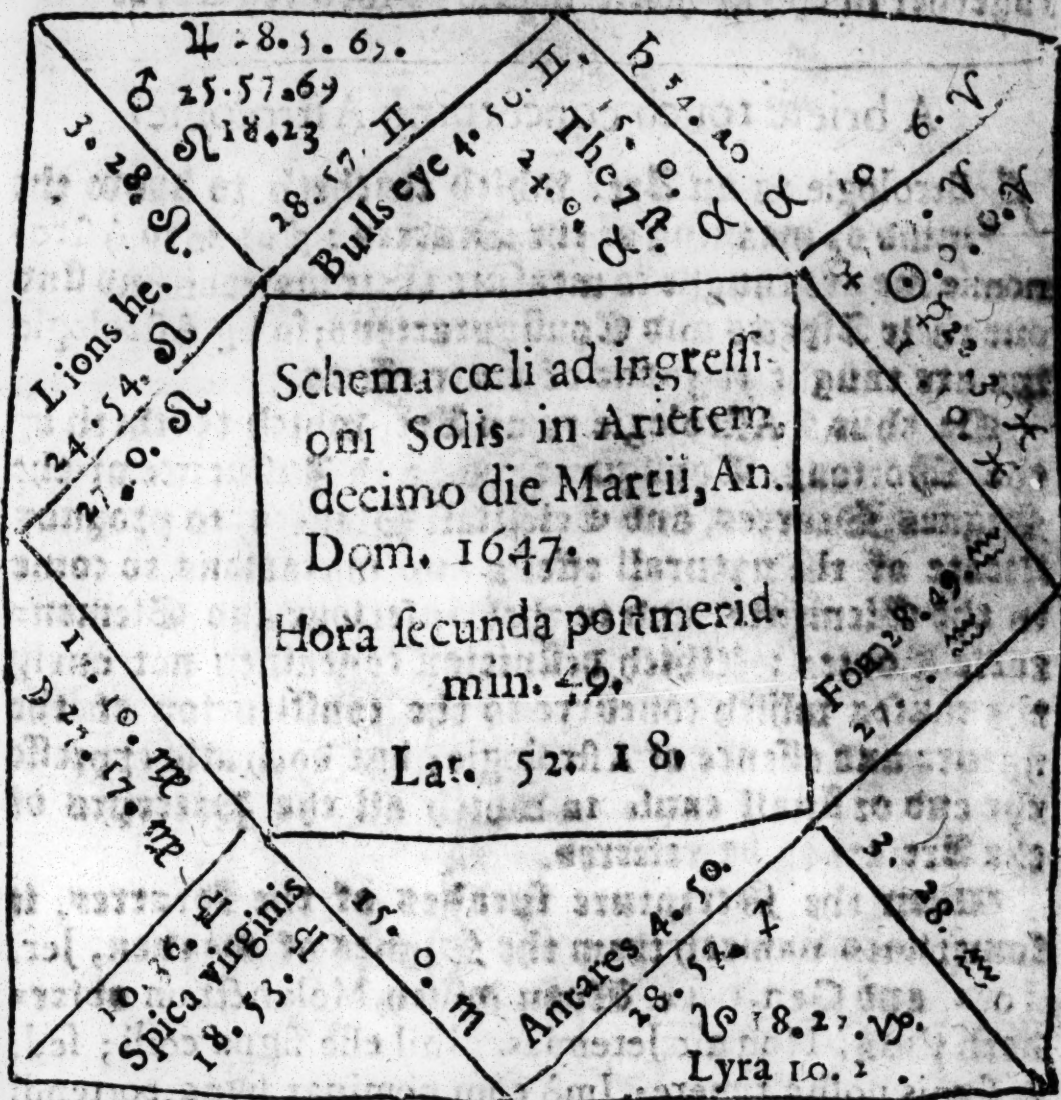

The Autumnall Equinox, that followes next, and is when the Sun doth enter the first scerple of Libra, which will be this yeare on the 13 of September, 25. minutes past 9 in the morning the 5. degree and 42. minutes of Scorpio then ascending. Mars is Lord of this Quarter; yet so, as Mercury, Jupiter and Saturne are in a manner of equall power with him.

Solstitium Hyemale, or that part which wee call the Winter Quarter begins with the Suns entrance into Cancer, which will be this yeare on the 11 day of December, 29 minutes past 8. at night the 23 degree of Leo being then in the Firmosope. Mercury is Lord of this Quarter; and indeed Mercury, the Moon and Jupiter are chiefe Dominators for the whole yeare. And as for a Figure of the Heavens at the Suns entrance into Aries, the next page will shew it.

Dove. 1647.

A figure of the Heavens at the time when the Sun enters into the first min. of Aries, the first sign of the twelve in the Zodiack.

In this figure the Ascendant is 27.0 of Leo: The Sunne is therefore Lord thereof. Saturne is almost exactly in the Cuspis of the tenth house. Jupiter and Mars are in conjunction in the 11 house, in Cancer the house of the Moone. The Sunne and Venus are in the 8 house, in Aries the house of Mars, not above 7 degrees asunder. Mercurie is also in the 8 house, in Pisces the house of Jupiter, opposing himselfe against the Moone, who is in the second house in Virgo, the house of Mercurie. The Sunne also hastens to meet the Moone in opposition, but is not far from a friendly

Trine with Jupiter The Moone, Jupiter & Mars are in a Sextile; especially Jupiter & she, at the very time of this Revolution. But that Jupiter & Mars should be so neere together in the 11 house, would be well regarded.

A briefe touch concerning Astrologie.

Astrologie is an Art, which teacheth to knowe the mind or meaning of the Starres: For as in Astronomie we are taught to measure their motions, and find out their Aspects and Configurations; so by Astrologie we are taught to judge of their effects.

Or thus: Astrologie is an Art, which teacheth by the Motions, Configurations, and Influence of the Signes, Starres, and Celestiall Planets, to prognosticate of the naturall effects and mutations to come in the Elements, and in these inferiour and Elementarie Bodies: Which definition containes not onely the causes which concurre to the constitution of the nature and essence of Astrologie; but doth also expresse the end or final cause to which all the Precepts of the Art are to be referred.

When the Scripture speaks of the Starres, it sometimes nameth them the Signes of Heaven, Jer. 10. 2. and Gen. 1. 14. Upon which, Melancthon observeth thus: Non ait Jeremias, nihil esse signa cœli; sed, A signis nolite timere: Imò cum nominat signa, portendit aliquid affirmat. And Luther also, upon the words of Moses in Gen. 1. Simpliciter Lunam cum Sole & Stellis in firmamento Cœli Moses dicit positas, ut essent signa futurorum eventuum; sicut experientia de Eclipsibus, magnis Conjunctionibus, & aliis quibusdam Meteoris docet. Sometimes it calleth them the Host and Armies of Heaven; amplifying thereby the Divine Power of God in these admired Instruments, by which he governeth the frame of this corruptible World: as may be seen in Gen. 2. 1. 2 King. 22. 5. and in Judg. 5. 20. In which last Text is expressly testified, that the

starres

starres fought from Heaven, the starres in their courses fought against Sifera. Beside, had the heavens & starres no force at all, the Scriptures would never distinguish between the sweet influences of the Pleiades, and the blinding vertues of Orion; but the Scripture makes such a distinction, in Iob 8. 21. *Veratque Deut. 33. 14. and Hos. 2. 21.* In which last Text the words be these; And it shall come to passe in that day, I will heare, saith the Lord, I will heare the Heavens, and they shall heare the Earth. By which is gathered, that what (in certaine other places) is said of some of the starres, is true of all the rest.

And for the searching into these things, thereby to be instructed concerning the event of such things as are thereunto belonging, the Scripture againe hath said, that the workes of the Lord are great, and sought out of those who have pleasure therein, Psal. 111. 2. We find therefore, that the children of Issachar are spoken of as men of eminence, in regard that they had understanding of the times, to know what Israel ought to doe, Chron. 2. 31. Moses and Daniel are commended likewise for their education and skill; the one, in the learning of the Egyptians; the other, in the learning of the Chaldeans; as we read in Act. 7. 21. and in Dan. 1. 17. And from whence was it that those Nations had this skill, but from Noah and Abraham, if Iosephus or Berossus may be credited?

I doubt not therefore, but that the Signes of Heaven may lawfully enough be looked into, & judgement be given of future events: In the knowledge of which Art, some come a great deale short of others, and doe onely see superficially; whilst others of deeper judgements, and more conversant in studies of this nature, will goe farre beyond them.

Crales humanorum membrorum sive corporum, etsi multa sumunt à materia seu à semine, tamen certum est, eas valde temperari potestate syderum, & ab eorundem positu variari & gubernari.

Dove. 1647.

Of the Eclipses this Year.

There will be this year a small Eclipse of the Moon
visible in our Horizon: It is on Sunday the 10.
of January; it begins about 10 minutes past 8 a clock
at night: the Sunne is almost in the first degree of
Aquarius, and the Moon almost in the degree of Leo.
The middle of this Eclipse is at 17 minutes past 9
and the end at 24 minutes past 10, so that the whole
time from the beginning to the end, is 2 houres 14
minutes.

There be also two other Eclipses, and both of them of the Sun, but will not be seen in England.

The first of these is on the 22 day of June, and may be seen in Spaine, the Southern part of France, and in many places of Africa.

The second is between the 15 and 16 day of December, and may be seen in Nova Guinea, the Islands of Salomon, and in the Land of Megellanica neere adjoining. The first of these two is a great and totall Eclipse, in the 10 degree of Cancer. The second of these is also a great Eclipse, but not totall, in the fourth degree of Capricorn. The first continueth three houres: The second, three houres and 36 minutes, according to the Observations of the Tris-noble Tycho.

Dove 1647.

Observations for Husbandmen.

In Januarie take off superfluous branches from fruit-trees, and prepare your ground for Gardens, uncover Tree-roots, cut your Vines in some of the Twelve dayes.

Set Dutch-sets, Roles, Sallets in the moneth of Februarie; And now cover up the Roots of your Trees with good Earth, which you opened before in the beginning of Januarie.

In March you may graft; but in planting and grafting chuse a warme time: whereof let not the Wind be in the East or North, because such winds are commonly nipping, especially being helped by any aspect of the Moone with Saturne or Venus in cold Signes, as Virgo, Capricorne, Taurus, Scorpio, Pisces, or Cancer.

In the end of April, or beginning of May, set and sow tender Herbes and Seeds in your Gardens, in a good temperature of Aire.

Remove young trees, either in the end of October, in November or Februarie, the Moone encreasing, and be sure to set that Side South, which was South before, because it cannot indure the cold North.

Weld Cartell, the Moone in Aries, Sagittarius, or in Capricorne, being in her last quarter.

Gather all fruit that you meane to keepe, in a drye time, when the Moone is at the full.

Sow all such Seeds as have round roots (as Onions, Leekes, Turneps, &c.) either three or four dayes before the full, or three or four dayes after the full.

6 9	0 5 12 0 8 9 0 1 12	6 0 9 1 12 1 7	0

The proportion of the pound *Avoir-du-pois* to the pound Troy, is as 60 to 73, so that 60 pounds *Avoir-du-pois* are equal to 73 pounds Troy. The proportion of the ounce Troy to the ounce *Avoir-du-pois* is as the 73 to 80, so that 73 ounces Troy are equal to 80 ounces *Avoir-du-pois*. Therefore the pound *Avoir-du-pois* is greater than the pound Troy: and the ounce Troy is greater than the ounce *Avoir-du-pois*.

Wheat

Dove 1547.

Wheat at 5 shillings the Bushell or Strike, the
 Town-bakers penny white, is (by Troy) 7 ounces, 7
 penny weight : by Avoir-du-pois 8 ounces : And the
 Countrey-bakers penny white (by Troy) 7 ounces, 13
 penny weight : by Avoir-du-pois 8 ounces & one quar-
 ter. If the Baker want one ounce in 16 ounces of
 this assay, he shall suffer the Pillory, without any
 fine or addition, 51 Hen. 3.

Astrologicall Elections. &c. briefly described for administration of Physick and Phlebotomy.

AS in all other parts of Physick, so in Phlebotomy
 or letting of blood, first skillfully and circum-
 spectly is to be considered and certainly knowne the
 cause : As whether it be needfull and good to the Pa-
 tient, as that it be to purge the body of some unnatu-
 rall, naughty, and superfluous humour. For other-
 wise, letting of blood is very dangerous, and openeth
 the way to many tedious infirmities. And note ge-
 nerally, that it is not convenient, either for a lean
 and weak man, or for a very fat and grosse man to be
 let blood, neither for a child under 14 yeares of age,
 nor an old man above 56.

Now there remaineth to be considered, how it stand-
 eth with the patient inwardly, for his complexion
 and age ; and outwardly, for the time of the yeare,
 time of the day, and dyer.

For the complexi- on ; Let blood the	}	Phlegmatick Melancholick Cholerick Sanguine	}	The Moon being in	}	Aries or Sagittarius Libra or Aquaries. Cancer or Pisces. Either of these.
